Page not found at /blog/2/abc
127.0.0.1:8000/blog/2/abc
Page not found (404)
Request Method: GET
Request URL: http://127.0.0.1:8000/blog/2/abc
Using the URLconf defined in routing.urls, Django tried these URL patterns, in this order:
1. admin/ [namespace='admin']
2. [name='home']
3. about/ [name='about']
4. contact/ [name='contact']
5. blog/ post_list/ [name='post_list']
6. blog/ category/<str:category_name>/ [name='category']
7. blog/ <int:post_id>/ [name='post_detail']
The current path, blog/2/abc, didn't match any of these.
You're seeing this error because you have DEBUG = True in your Django settings file. Change that to False, and Django will display a standard 404 page.
